Getac OEMConfig

EMM's Perfect Companion for Getac Device Management

Supporting a range of EMM platforms, unlocking the full potential of your Getac Android devices and packed with essential device controls.

ENTERPRISES NEED OEMConfig FOR THEIR EMM

If you are already using an MDM or EMM software to mass deploy configurations to your devices, we recommend using **Getac OEMConfig** for additional settings deployment. **OEMConfig** provides enhanced proprietary settings for EMM and MDM platforms. Patching all your remote devices to the latest version through the cloud without having to physically take hold of the devices.

Enterprises ideally want to run a single EMM platform, to simplify the security and management of their mobile devices.

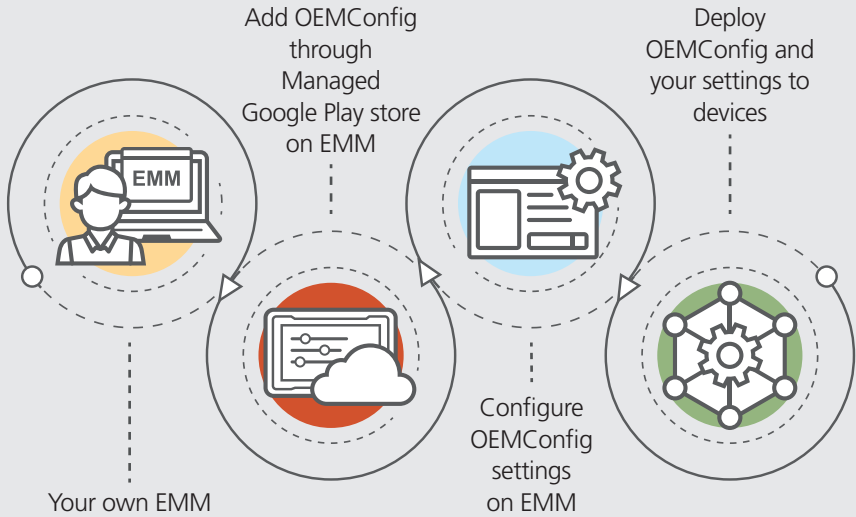

However, EMM systems lack control over hardware settings for Android devices, enterprises need mass configuration with the minimal amount of interaction.

OEMConfig – THE PERFECT APP FOR UNLOCKING GETAC ANDROID DEVICE CONFIGURATION ON EMM PLATFORMS.

Deploy settings to your Getac Android devices just like any other app!

HOW OEMConfig WORKS?

SOLUTION FEATURES
